

VisionCatering for Office365

Digital ordering for food and beverages, when you arrange the meeting in your Outlook calendar

No more manual stickies and lack of overview of ordered catering when you arrange a meeting and order food and drinks to the meeting.

With VisionCatering you can order bread, water, coffee, tea, among other things, in the same process as when you book the calendar meeting in Outlook.

When a meeting is booked in the Outlook calendar, the meeting organizer completes a digital order form where he or she can indicate which catering should be prepared and be available in the booked meeting room:

Vare Bestil

Kaffe

Te

Sandwich 10

Mælk

Bemærkning
Og lidt god chokolade, hvis vi har noget liggende?

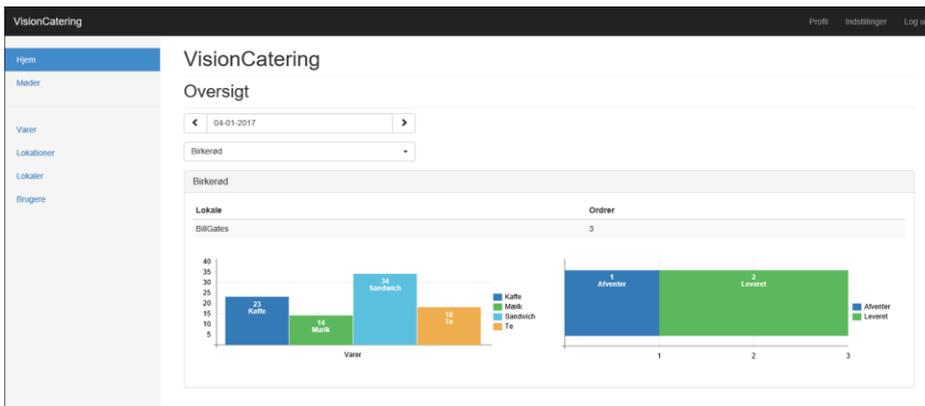

Send ordre

The program sends a digital message to the canteen, kitchen, reception or the person responsible for delivering the catering to the meeting, so that everything can be purchased and made ready for the meeting.

The order form can also be used as communications to the canteen from the meeting organizer for special requests and messages which the canteen must take into account in relation to the refreshments for the meeting and/or preparation of the meeting room.

The digital order form is fully integrated into the Office365 and can be managed and edited by the canteen, so that the food and beverage can reflect the day's or week's options.

The persons responsible for the catering have a real time updated overview of the scheduled meetings and the deliveries, which should be ready for the meetings, and how much is ordered in total for the next few days, so that the canteen can plan procurement, production and preparation of the deliveries:

The solution also includes cost center registrations, so that ordered catering can be charged the company's various departments.

An additional module allows all employees to specify which days they are attending the canteens lunch and then the canteen / kitchen can plan company lunches based on number of participants - visualized digitally, rather than manual notes.

Features:

Digital ordering of food and beverages

When you arrange a meeting in the Outlook calendar, you fill in a digital order form with the needed food and beverages for the meeting.

The canteen or reception is automatically notified

Right after the meeting is booked in Outlook, the required food and beverages for the meeting is visualized for the people responsible for the deliveries.

Overview of orders

The canteen or kitchen has access to a list showing the catering ordered for today's and the next few days so that they can buy and/or produce it (coffee, tea, sandwiches, bread, cake, etc.). Digital enrollment to the coming days lunches is available as an additional module.

Dynamic order form

The persons responsible for the delivery of food and beverage for the meetings can adjust the digital order form so that the menu list reflects the possible deliveries.

No more manual stickies

In the meetingbooking process, a message can be written to the recipient so that e.g. the canteen can get the meeting booker's comments on special requests for the meeting or useful comments to the order.

Possibility of extensions

If you want further integration, you can expand the solution so that the order can be send directly into the kitchen's food production system or, for example, displaying the "menu" or other meeting information on a screen at the meeting room.
