

VisionSmartClient

- Place and change orders while you are away from the office.

Key Features

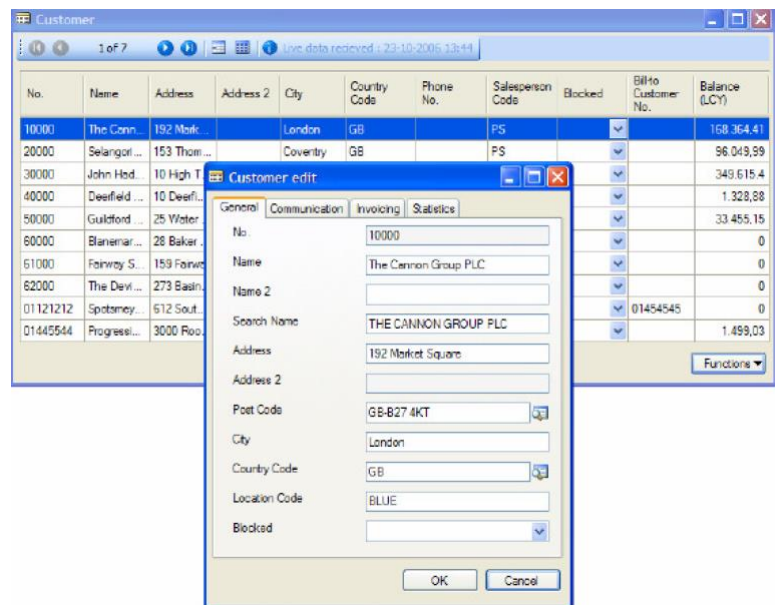

- Manage customer and sales information from outside the office.
- Based on VisionConnector
- **Applicable in:**

Microsoft Dynamics NAV:
Version 3.70
Version 4.0

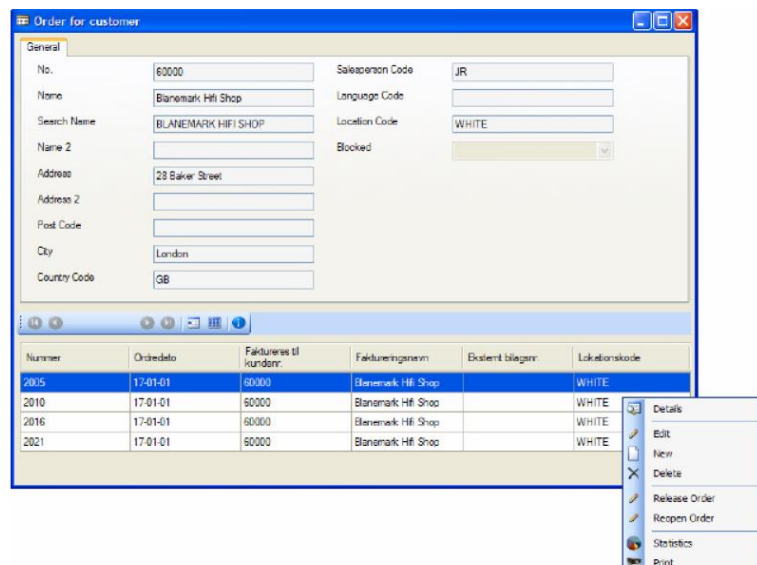

VisionPeople offers a Smart Client for Microsoft Dynamics NAV enabling your employees to access specific data and business logic from Microsoft Dynamics NAV over the internet.

The solution supports the sales process including converting a Sales quote to a sales order, updating prices, viewing statistics, printing documents etc.

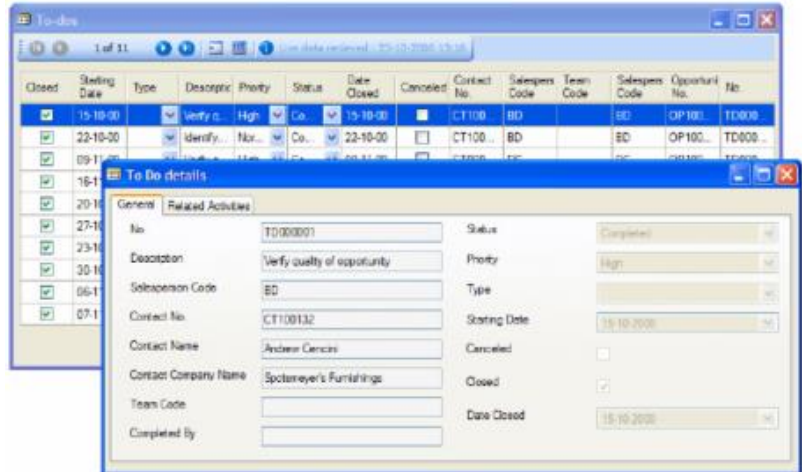

View and edit customer data and sales documents

Microsoft Dynamics NAV reports are also available

In addition, VisionSmartClient provides access to the CRM module where Contracts and Tasks can be viewed and edited.

Working on live data

When visiting customers, the salesperson might need to take a look at the latest customer details – and after the meeting, set new tasks or enter new price agreements in the system.

In VisionSmartClient, you work directly in the database. The data will therefore always be updated.

ClickOnce

The solution is a Smart Client, where the business logic has been moved from the web-server to the individual clients. This requires installation of a product to communicate with the server.

This is done using Microsoft's "Click Once" technology.
