

VisionMultiLineText

Tired of line breaks in comments?

Key Features

Dynamic text!

VisionMultiLine-text makes it possible to work flexibly with the text in comment fields

- Write text in Microsoft Dynamics NAV - without worrying about line breaks, which can interfere typing rhythms
- Write more fluent and reading friendly in Microsoft Dynamics NAV

VisionMultiLine-text is the solution that allows you to enter text in Microsoft Dynamics NAV - without the user having to worry about line breaks.

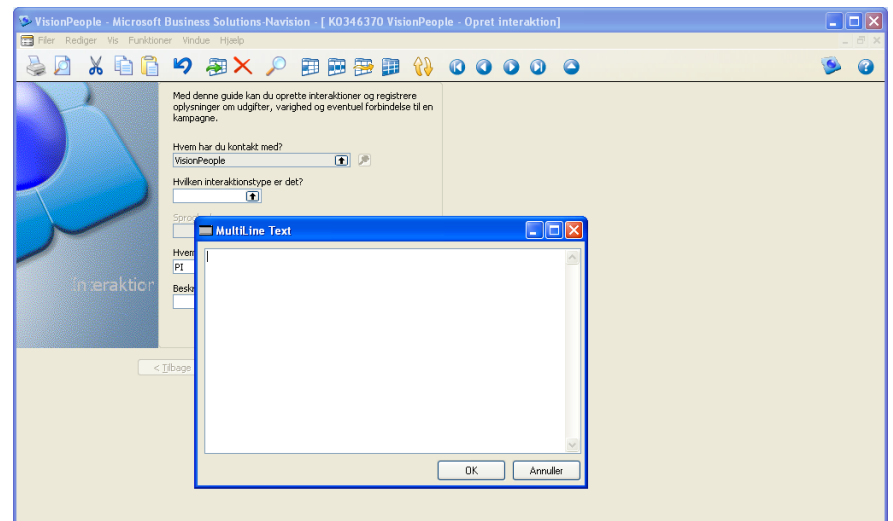

When remarks – e.g. on debtor cards, entry cards or elsewhere - are entered in a standard Microsoft Dynamics NAV solution, the user must remember to break the line at the right places. With **VisionMultiLine-text** you just write the text, like in Microsoft Office Word.

Once you have completed your typing, the text is broken up into lines that fit with Microsoft Dynamics NAV fields.

This will secure:

- A more free and natural typing
- Enables simple copying to and from Microsoft Dynamics NAV using the normal “cut and paste” functions known from Windows.

The MultiLine-text will look like this:

Comments will be more writing and reading-friendly - while the text in the box / window is dynamic. This means, among other things, that e-mails can be copied into the box, which is a useful advantage in CRM, where the correspondence with the customer can be registered on the contact card. It is possible to get these text boxes / windows associated with all files in Microsoft Dynamics NAV.
