

# VisionRepeatOrder

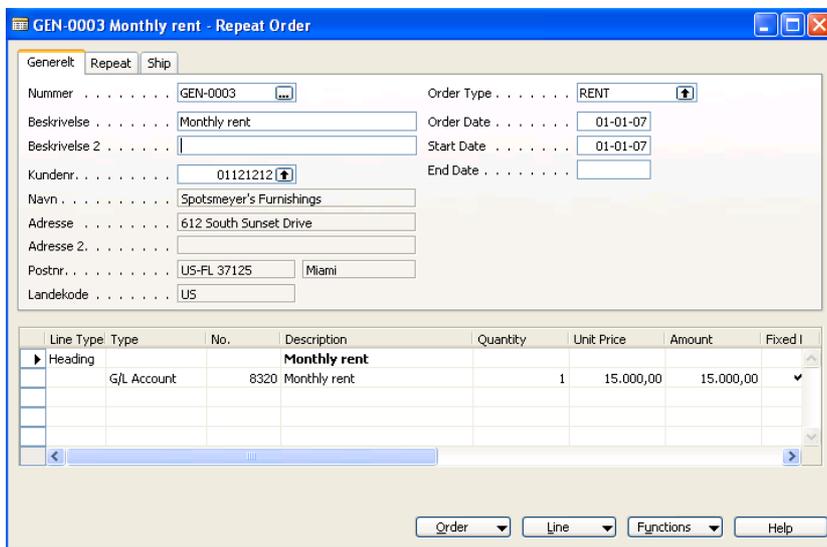

## Manage your repeated orders in Microsoft Dynamic NAV

### Key Features

- Create recurring orders, invoices and credit memos
- Manage members, service agreements etc.
- Define as many different intervals as you need
- Create orders, invoices etc. via batch job

**VisionRepeatOrder** is a Microsoft Dynamics NAV add on developed for handling customer orders (Invoices and credit memos) that are posted over and over again without the document being “deleted” after posting.

With **VisionRepeatOrder** you can easily control customer subscriptions, upgrade agreements, service agreements, rent, monthly fee etc. – only your imagination sets the limit.

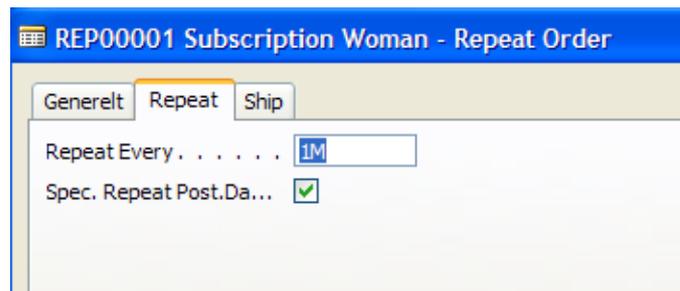

The screenshot shows the 'Repeat Order' window for order GEN-0003. The 'Order Type' is set to 'RENT'. The 'Order Date' and 'Start Date' are both 01-01-07. The customer is 'Spotsmeyer's Furnishings' located at '612 South Sunset Drive', 'US-FL 37125', 'Miami', 'US'. The order lines table is as follows:

Line Type	Type	No.	Description	Quantity	Unit Price	Amount	Fixed I
▶	Heading		<b>Monthly rent</b>				
	G/L Account	8320	Monthly rent	1	15,000,00	15,000,00	✓

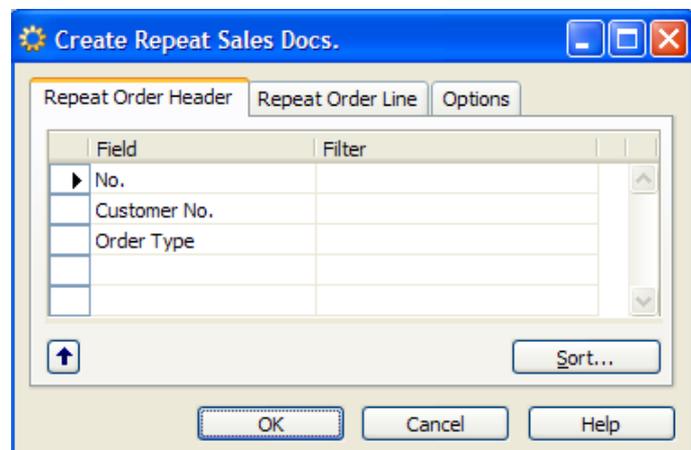

It is possible to use different type of lines in **VisionRepeatOrder**, for example G/L Account, Item, Resource or Charge (item). Furthermore you can add text lines to be shown on the customer documents, as well as internal notes, not to be shown.

The system allows you to define the predefined intervals from which the Orders should be invoiced.

There is no limitation to the recurring intervals as the system uses the data formula codes from Microsoft Dynamics NAV. This means that you can define intervals like a specific day, every month, quarter etc.

When creating the recurring orders, you have the option to filter on different dimension - for example Customer No. or Order Type.

Having created the documents only thing left to do is Post them as usually in Microsoft Dynamics NAV.
